

```
#include<stdio.h>

int main()
{
    double first, second, temp;
    printf("Enter first number: ");
    scanf("%lf", &first);
    printf("Enter second number: ");
    scanf("%lf", &second);

    temp = first;

    first = second;

    second = temp;

    // %.2lf displays number up to 2 decimal points
    printf("\nAfter swapping, first number = %.2lf\n", first);
    printf("After swapping, second number = %.2lf", second);
    return 0;
}
```
